Commercial Energy Auditing Reference Handbook, 4th Edition

Author: Steve Doty

This practical reference consolidates essential data, tools, and insights for energy professionals into a single, time-saving resource. Combining tables, charts, and key facts with real-world context, it highlights system interactions, trade-offs, synergies, and common pitfalls. The book emphasizes optimization strategies that preserve occupant comfort and business operations, covering efficiency assessments, retrofit approaches, automated controls, and methods for estimating—and sustaining—energy savings. While focused on commercial buildings, the guidance extends to industrial applications, including process optimization, heat recovery, steam systems, compressed air, power factor correction, and water treatment. The 4th edition features updated content and expanded coverage of demand management, interval data analysis, balance temperature applications, advanced heat pump systems, lighting efficiency, regression techniques, and tertiary pumping optimization. Drawing on over 30 years of experience and 300+ energy audits, this trusted resource delivers practical, field-tested knowledge for improving energy performance.

TABLE OF CONTENTS

- Benchmarking
- Analyzing Energy Use Graphs
- Energy Savings Opportunities by Business Type
- Manufacturing and Unit Operations
- ECM Descriptions
- Utility Rate Components
- Automatic Control Strategies
- Building Operations and Maintenance
- Quantifying Savings
- Sustaining Savings
- Mechanical Systems
- Motors, VSDs, and Electrical Information
- Combustion Equipment and Systems
- Compressed Air
- Fan/Pump Control and Belt Drives
- Lighting
- Envelope Information
- Domestic Water Heating
- Weather Data
- Pollution and Greenhouse Gases
- Formulas and Conversions
- Water Efficiency
- Regression for Energy Management
- Special Topics

24A-Data Center Efficiency

24B-Percent Per Degree Rule of Thumb for Refrigeration Cycle Improvement

24C-Early Replacement Business Case

24D-HVAC Overlapping Heating and Cooling

24E-Coordinating Upstream / Downstream Setpoints

24F-Semiconductor Fab Multi-Stage HVAC Air Tempering

24G-HVAC Retrofits for the Three Worst Systems

24H-Chilled Water System Discussion and ECMs

24I-Concepts and Samples to Identify Efficiency Measures

24J-Part Load HVAC Efficiency

24K-Energy Use Signatures as an Operational Control

24L-Facility Guide Specification: Suggestions to Build-In Energy Efficiency
