The Smart Grid
Enabling Energy Efficiency and Demand Response

Author: Clark W. Gellings

The power system has often been cited as the greatest and most complex machine ever built, yet it is predominantly a mechanical system. Technologies and intelligent systems are now available that can significantly enhance the overall functionality of power distribution and make it ready to meet the needs of the 21st century. This book explains how sensors, communications technologies, computational ability, control, and feedback mechanisms can be effectively combined to create this new, continually adjusting "smart grid" system. It provides an understanding of both IntelliGridSM architecture and EnergyPortSM as well as how to integrate intelligent systems to achieve the goals of reliability, cost containment, energy efficiency in power production and delivery, and end-use energy efficiency.

River Publishers Series in Energy Sustainability and Efficiency

ISBN: 9781439815748
e-ISBN: 9788770222839
Available From: September 2009
Price: $ 155.00
